

*Data sheet***P.000****PASTE DILUTION RESIN****NATURE AND PRODUCT FEATURES:**

Synthetic resin solution with broad compatibility spectrum.

FIELD OF APPLICATION:

Dilution resin for **P-series** concentrated pastes. Used to facilitate and optimize the dosing of small amounts of concentrated pastes. Especially suitable for organic and inorganic solid pigment pastes.

HOW TO USE AND PRODUCT PREPARATION:

Select the required formulation from Colortech, choose the converter and set the desired quantity. In the case of preparing small amounts of enamel, very small weighings may be required that are very difficult to dose. In these situations, it is more convenient to mix the paste to be weighed at a ratio of 10 to 90 with **P.000** paste elongation resin and weigh 10 times the amount required in the formulation. In case of using prediluted pastes, recalculation of the dosage is done automatically by the system by clicking on the "green 10% box" in the formulation screen.

Prediluted paste preparation:

P-series coloring paste **10 parts**

P.000 **90 parts**

Mix thoroughly by hand or with stirrer.

NOTE:

Not recommended for fluorescent, aluminum, pearl, textured and matte pastes. Store in suitable rooms and away from heat sources, at temperatures between 0 °C and 35 °C.

Close containers thoroughly immediately after use.

Always stir well before use.

The data and information contained in this sheet are the result of our experience and accurate laboratory tests. However, since the painting process represents a set of operations that are beyond our control, they do not therefore guarantee, in any way, the final performance of the cycle.
