

Data sheet

Z.090

ANTI-BACTERIAL ADDITIVE

NATURE AND PRODUCT FEATURES:

Additive based on a special polymer capable of releasing silver ions.

The addition of the additive in solvent-based paints allows the formation of a film with high anti-bacterial properties that can inhibit cell duplication and thus the proliferation of E-Coli and MRSA (antibiotic-resistant staphylococcus) strains of bacteria.

FIELD OF APPLICATION:

Can be used in all single- and/or two-component, glossy and/or matte paints, or in solvent-based glossy, matte or semi-matte converters.

PREPARATION OF THE PRODUCT:

Use 1% to 3% in addition to the finished product.

Mix carefully making sure the additive is evenly mixed.

For the subsequent preparation of the paints, and the application of the paints, follow the directions recommended in the relevant data sheets.

SAFETY REGULATIONS:

Strictly follow the instructions on the labeling and in the safety data sheet.

STORAGE CONDITIONS:

The storage room must be dry and with a temperature between +10 °C and +35 °C.

The data and information contained in this sheet are the result of our experience and accurate laboratory test. However, since the painting process represents a set of operations that are beyond our control, they do not therefore guarantee, in any way, the final performance of the cycle.
