## PW Series

# WATER-BASED MULTIPURPOSE PASTES

### NATURE AND PRODUCT FEATURES:

Concentrated resin-based pigment to be mixed with **Colortech** system converters with very low VOC content.

### FIELD OF APPLICATION:

They are used by mixing with **KW** converters (resins) of the **Colortech** tinting system to obtain finished enamels in the various matte pastel colors.

The **PW series** multipurpose pastes have a high concentration of pigment which allows obtaining enamels with great hiding power.

They can be used with all **KW** series converters of the Industry list, in the ratios indicated in our **Colortech** chart.

### PREPARATION OF THE PRODUCT:

The **PW series** pastes are added to the **KW** series resins pre-weighed according to the formulations of the chosen color and inserted in the **Colortech**.

After adding the pastes to the converter, they must be dispersed immediately with a mechanical shaft stirrer (not gyroscope) if possible or, alternatively, limited to small quantities of finished product (1-2 liters) with strong manual stirring.

*The data and information contained in this sheet are the result of our experience and accurate laboratory tests. However, since the painting process represents a set of operations that are beyond our control, they do not therefore guarantee, in any way, the final performance of the cycle.*
