PW8 Series

MULTIPURPOSE PASTES WATER-BASED PEARL PIGMENT

NATURE AND PRODUCT FEATURES:

Aldehydic and film-forming resin pearl pigment concentrate for mixing with **Colortech** system converters.

FIELD OF APPLICATION:

They are used by mixing with the **KW** (Resins) converters of the **Colortech** tinting system to obtain finished enamels in the various mica/pearl colors.

The **PW8** series multipurpose pastes have a high concentration of pigment which allows obtaining enamels with great covering power.

They are particularly suitable for 2K converters such as our **KW721** and **KW723**, and 1K converters such as our **KW374**. You can also use them on 1K resins such as **KW431**, **KW433**, **KW631** and **KW634**.

PREPARATION OF THE PRODUCT:

The **PW8 series** pastes are added to the **KW** series resins pre-weighed according to the formulations of the chosen color and inserted in the **Colortech**.

After adding the pastes to the converter, they must be dispersed immediately with a mechanical shaft stirrer (not gyroscope) if possible or, alternatively, limited to small quantities of finished product (1-2 liters) with strong manual stirring.

STORAGE CONDITIONS:

Store in unopened and sealed packages kept at a temperature of +5 °C to +30 °C.

The data and information contained in this sheet are the result of our experience and accurate laboratory tests. However, since the painting process represents a set of operations that are beyond our control, they do not therefore guarantee, in any way, the final performance of the cycle.
